COTTONSEED REVIEW - SOUTHWESTERN AREA

Generally ideal harvesting weather conditions prevailed over the area during the past week. However, during the first part of this week the coldest weather of the season blew into the area and all field operations and ginning was at a standstill. Until this change in weather conditions harvest of the cotton crop was making excellent progress and the movement of cottonseed to crushing mills continued at a moderate rate, according to the number of grade certificates received during the past week. The crop on the high plains is now estimated at 685,000 bales and the latest reports are that about 80 percent of the crop is harvested.

Cottonseed grades in Oklahoma and Texas this week were slightly lower than last week. In Oklahoma the average grade of cottonseed was 105.0 compared with 105.5 last week and 102.5 during the corresponding period one year ago. In Texas the average grade of seed was 105.0 compared with 106.0 last week and 102 one year ago.

In Oklahoma this week the wagon lot price of cottonseed f.o.b. the gins averaged \$101.80 per ton which was unchanged from last week's price. Prices this week ranged from \$95.00 in District 3 to \$110.00 per ton in District 4. In Texas the average gin yard price was \$105.30 per ton this week compared with \$103.80 per ton last week. Prices ranged this week from \$80.00 in District 5 to \$120.00 per ton in District 4. One year ago the average gin yard price in Oklahoma was \$42.10 per ton and in Texas \$43.20 per ton. The average oil mill price (basis grade 100 and "as is") during the week in Oklahoma was \$115.00 per ton; in Texas \$112.50 per ton.

The sampling and grading of cottonseed is under the supervision of the Production and Marketing Administration.
